# 1. Introduction

In this document we determine which tasks are to be performed for each feature that is to be implemented during this iteration. Each task is assigned a group member that is going to perform the said task. There is also an estimation of the time that this will cost. The actual time it took is added at the end of the iteration. This is all in the table in chapter 2.

In chapter 3 is a short reflection on the main problems that were encountered during the iteration and the adjustments that were made to the iteration planning.
